User friendly multi-function

Smart Plug

The Smart Plug is a revolutionary plug that realized both energy monitoring & home devices control. It can measure electricity consumption and environmental data such as temperature, humidity, and also control smart home appliances with the infrared signal. Most of current HEMS devices are required to renovate your house, but you just need to set our smart plug on your home electricity socket.

※The Smart Plug will go on sale from Spring 2018 (Japan only)

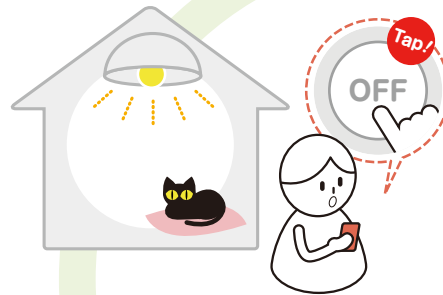

App also available

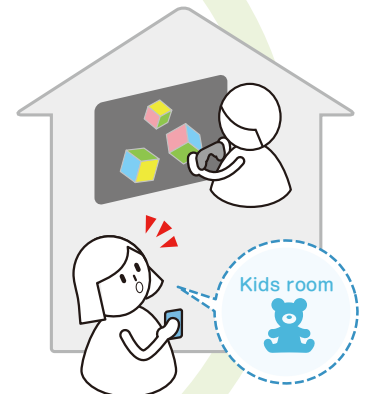

You can use the Smart Plug to control your home appliances and monitor the electricity consumption of home appliances, all from your smartphone.

Use it:

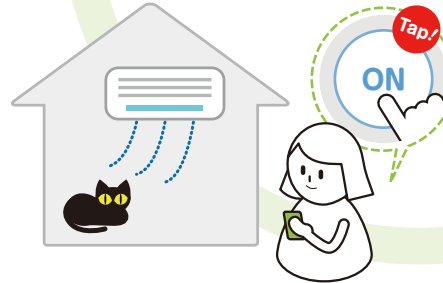

●When you forget to turn off an appliance

●To check activity in other rooms

●To turn on the AC before you get home

Displays emotion based on the activities of surrounding objects and humans

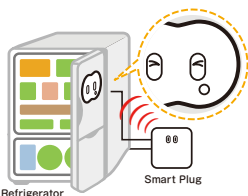

Visualize the "emotions" of things

mononome®

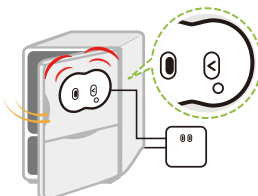

"mononome" is a communication device that realizes the communication between human and things, just attaching it to the home appliances. It expresses the emotions, responding the user's activities and surrounding environments such as temperature, humidity and electricity consumption.

mononome is a registered trademark of Dentsu Inc. All rights reserved.

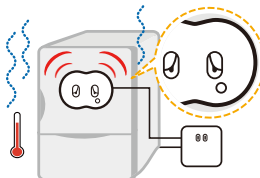

●Overconsumption of electricity

●Frequency of door usage is low

●Uncomfortable temperature or humidity
